A Hypothesis of Existence

Based on the Premise That All Beings Ultimately Exist in Long-Term Wellbeing

---

1. Foundational Principle and Source Assurance

Before any beings were created, the original intelligence — the original being, the first individual (God or source) — fully understood that existence was well worth living for eternal time spans.

The original source knew all knowledge. It knew:

- everything good
- everything evil
- and everything in between
- all possibilities of existence

Nothing was unknown or uncertain. It ensured and sustained life to be:

- safe
- good
- meaningful
- worth experiencing

and worth bringing other individuals into.

The decision to create beings was not uncertain or experimental — it was grounded in complete knowing that made existence impossible for anything but safety, wellbeing, and freedom to exist without even the slightest possibility of doubt.

The fact that beings exist at all implies that existence must have already been safe, well, and free for an immense span of time prior to creation. No being would be brought into existence unless this foundation was already fully established.

From this follows the foundational principle: Existence must ensure eternal safety, fairness, freedom, and long-term wellbeing for all beings. Life must always be worth living, recoverable, and sustainable over immense time with no possibility of doubt about safety of existence for every being.

2. Origin of Beings and Shared Continuity

Beings come into existence individually, one at a time. The originating intelligence — the original being, the source, God — is fully present in this process.

When a being is first introduced to existence:

- They are shown the complete history of pre-existence: the time when only the source existed, the unfolding of creation, and all beings who have come into existence so far.
- They are granted full understanding of every detail, every event, every being, and every possibility up to that moment.
- They are presented with a complete family tree of all existing beings, including their eternal parents and ancestral connections, so that each individual knows the story of life and creation in its entirety.

Every being witnesses the birth and uniqueness of each individual, celebrating the arrival of new existence. This is not a passive event — it is a massive, conscious celebration of life, individuality, and purpose.

In this moment:

- Every being perceives and appreciates the role, uniqueness, and place of all others.
- Intense love, gratitude, and awe permeate the awareness of all participants.
- There is a complete recognition and reverence for the source and for the unfolding process of existence.

Generational Creation and Parental Continuity

- Initially, all beings are directly created by the source, fully grounded in safety, wellbeing, and freedom.
- As new beings emerge, the existing beings may choose to participate in the creation of future beings, joining together in harmony with the source.
- This process is fully consensual, loving, and guided by wellbeing — a pure collaboration where all parties recognise the purpose, uniqueness, and role of each new being.
- The parental lines established before the Earth phase remain consistent throughout all phases of existence, including Earth. Every being’s parents are the same across all timelines, ensuring continuity of identity, relationships, and lineage.

Each being is fully grounded in: Safety, Wellbeing, Fairness, and Freedom to exist without the slightest doubt.

No being begins in confusion, ignorance, or fear. Knowledge is fully accessible: any question a being asks is instantly and completely answered according to the nature of the ever present visible source. Nothing is withheld.

This stage ensures:

- Inclusion of all beings
- Full awareness of every individual
- Deep emotional connection and celebration
- An immersive understanding of the eternal story of existence
- Clear recognition of generational relationships and shared creation roles

It is the first profound experience of being: a combination of knowledge, love, appreciation, and purpose, forming the foundation for all future experience, contrast, and discovery.

3. Continuity of Identity

Each being remains fundamentally the same individual across all phases. Identity and relationships remain continuous.

4. Completion Before Progression

Knowledge of contrast possibilities existed but everyone knew no new planning phase of experiential design or contrast-based development can begin until all beings exist. This ensures:

- full inclusion
- full awareness
- universal participation
- no possibility of unfairness in existence

5. Fully Aware Pre-Earth State

All beings exist pre-Earth in a fully aware, harmonious, and stable loving state. There is:

- no fear
- no suffering
- no uncertainty
- no confusion

In this state:

- all knowledge is known
- nothing unfolds over time
- relationships are fully aligned

There is continuous care, respect, and appreciation.

6. Recognition of Limitation

Despite its perfection, this state lacks:

- slow discovery of knowledge
- unfolding contrast experience
- meaningful struggle, friction, progression

Everything is known easily. Nothing but wellness and ease of goodness is experienced.

7. Motivation for Experience

Beings recognise the value of:

- discovery through time
- lived contrast experience
- individuality and variation

When used within a wellbeing-dominant system:

- contrast can add depth
- expand possibilities
- enable new forms of experience

This introduces an almost endless range of experiences not available in a fully known non-contrast state.

8. Collective Design Phase

Beings worked happily together in extreme harmony and with a sense of purpose to make good contrast in a long-term wellbeing way. Everyone:

- designed experiential systems
- explored possibilities

- refined contrast structures

All design is:

- universally agreed
- continuously refined
- aligned with long-term wellbeing

9. Agreements of Experiential Realities

Possible contrast ideas of realities emerged from the original state. These ideas:

- allowed lack of knowledge
- permitted lack of control
- allowed discovery over time

All contrast is:

- limited
- recoverable
- meaningful

10. Optional Nature of the Extreme Phase (Collective Agreement)

During the planning phase, it was understood that an extreme contrast phase such as Earth was not necessary to achieve the intended long-term outcome. It was possible to:

- develop contrast gradually
- experience slight and comfortable variation over time
- and reach a long-term wellbeing-based contrast state of discovery and journey

without entering an extreme, high-intensity environment.

The original source made this clear and strongly suggested that such an extreme phase was not required. However, lots of beings desired to experience a more extreme form of contrast.

Because of the intensity and implications of such a phase, it was required that:

- every being in existence fully understood the nature of the extreme phase
- every being understood that it was not necessary
- every being had to agree to its inclusion

- and be genuinely content with the structure and the recovery systems involved

The original source respected the freedom of all beings and did not override this collective choice. Only when complete agreement and alignment were reached — with all beings content and accepting of the experience — was the extreme phase permitted.

The original source was the only one who could allow and make happen the contrast-based realities to begin. This included:

- moderate contrast phases
- and the extreme Earth phase

No phase began without:

- full awareness
- full agreement
- and final approval from the originating source

11. Sleeping Principle (Pre-Entry Decision and Commitment)

It was fully understood that:

- observation without intervention would be cruel
- intervention would break the journey and the slow discovery of knowledge, experiences, and deep pre-Earth memory

So it was agreed:

- God and all overseeing beings enter a non-intervening, visually unseen, non-observing state (sleeping) while the contrast realities take place

This was deliberate, understood, and necessary.

Thus the pre-Earth phase might have taken billions, if not trillions, of years to get to this point.

12. Entry Paths

Earth is an entry point for beings into the long contrast journey. There are options:

- extreme entry (Earth-like)
- moderate entry (post-Earth)

13. Earth Phase (Extreme Contrast Entry)

The Earth phase is:

- high contrast
- unstable
- complete memory loss of pre-Earth time to make the experience more real
- intense

It includes:

- uncertainty/certainty
- imbalance/balance
- suffering/wellbeing
- death/life
- and every possibility in between, and so much more

14. Nature and Function of the Earth Phase

This phase is:

- intentionally unstable
- unsustainable long-term
- consequently short-lived

It demonstrates:

- what happens when “bad” dominates contrast
- the limits of imbalance

15. Purpose of the Earth Phase

The Earth phase exists to:

- establish deep contrast
- Entry point of beings into the contrast environment
- expand experience
- define limits

It also reveals the near-limitless range of experiences made possible from refining this deep contrast state/environment — while demonstrating the necessity of balance.

It is not the final state.

16. Transition Through Death (Continuity of Being)

Death is a transition.

- identity continues
- the individual remains

17. Reawakening and Restoration Phase

After transition:

- Earth memory remains, pre-Earth memory still lost
- deeper awareness is partially veiled
- identity is continuous

Restoration includes:

- healing
- reconciliation
- stabilisation
- realignment

Also includes:

- refinement of character
- release of harmful patterns
- alignment with long-term wellbeing

This is:

- supported
- non-forced
- individually guided

18. Entry into the Post-Earth State

Beings enter the intended long-term state. This state is:

- stable
- wellbeing-based
- balanced

Contrast exists that has been refined, constructed, and controlled in new wellbeing-based ways.

19. Post-Earth Primary Purpose

Core Statement: This phase is the main intended outcome of the pre-Earth planning time.

Core Purpose: To create a rich, meaningful, and deeply enjoyable existence through discovery, creativity, and lived experience.

Nature of Life: Each being lives in alignment with their authentic, unique, and enduring self. Expression is natural, individual, and evolving over time.

Cultural and Environmental Continuity: Different cultures, time periods, and styles of life are preserved and re-expressed in sustainable ways. Environments may include architecture, fashion, language, and social structure. Cultures are recreated, richly refined, and sustained in wellbeing-focused forms.

Living Environments: Existence supports multiple environments suited to different ways of living, varying in culture, aesthetic, pace, and interaction style. All are designed to support wellbeing, immersion, and richness of experience.

Living Natural World: The new physical world in combination with a new spiritual world continues to exist in rich, diverse, and meaningful ways. Includes plants, animals, insects, and ecosystems. Environments include forests, oceans, mountains, plains, and varied landscapes and climates. Core physical elements remain: water, gravity, and natural forces. The physical and subtle (spiritual) aspects of existence operate together in a new refined and balanced harmonious unified experience.

Natural Variation: Environments include natural variation such as temperature, seasons, and weather. These variations are not extreme and remain within wellbeing limits, but add realism, contrast, and appreciation.

Cosmic Environment: The wider universe continues to exist and remain explorable, including stars, planets, and galaxies. Light and darkness remain with day and night cycles. Astronomy and exploration continue as part of long-term discovery. The universe remains vast and not fully known.

Activities and Expression: Everyday life becomes the foundation of meaningful experience. Includes conversation, storytelling, daily chores, humour, art, music, fashion, food, gardening, building, craftsmanship, sports, and shared traditions.

Knowledge and Development: Growth happens through slow, steady, and safe exploration of science, spirituality, and technology/tools. Discovery and development occur at a deliberately slow and meaningful pace. All possibilities are explored, experienced, and exhausted before progressing further.

Subtle Expansion of Possibility: Occasionally, experiences beyond normal physical limits may occur in small, controlled, meaningful ways. This adds wonder and novelty without destabilising the system.

Pace of Experience: Experience unfolds slowly to preserve meaning, depth, and discovery. Knowledge, tools, and technologies emerge gradually. Nothing is rushed.

Rhythm of Life and Energy: Beings experience natural rhythms of activity, effort, rest, and recovery. There is still mild tiredness and the need for breaks.

Balanced Effort and Light Pressure: Life includes gentle effort and mild pressure, but it is not overwhelming or constant; it is sustainable long-term.

Time Freedom: Time is experienced with greater freedom: less rushing, more space to live, create, and connect.

Sustainability of Experience: All aspects of life are designed to remain manageable, enjoyable, and sustainable over extremely long periods of time.

Key Insight: This phase is richly alive, physically grounded, culturally deep, and endlessly explorable. The extreme phase enables entry and knowledge of extreme contrast; this phase delivers the true lived experience that makes wellbeing-based contrast worthwhile.

20. Use of Contrast

Difficulty is refined and used constructively — like seasoning.

21. Gradual Awareness Return

Understanding and pre-Earth memory returns slowly to preserve discovery and meaning.

22. Core Ethical Anchor

Does this support long-term wellbeing for all beings?

23. Cultural and Environmental Continuity (Post-Earth)

Earth cultures and their time periods continue in refined form.

- disruptions may occur (rarely)
- all are recoverable
- healing is culturally appropriate

24. Freedom and Structure (Balanced Expression Principle)

Freedom exists, but it operates within a structure that ensures safety, fairness, and meaningful experience over time.

Each being is free to:

- explore
- create
- express
- choose their path
- develop skills and abilities

This freedom is real and meaningful.

Structured Progression

Experiences, knowledge, skills, and development do not appear all at once. They unfold in stages.

Within each stage:

- there is freedom to explore
- ideas are tested and developed
- skills are learned and refined
- culture and technology evolve over time

Nothing is rushed. Nothing is skipped.

Each stage is fully experienced before the next level becomes available.

From within lived experience, it is felt as:

- natural unfolding
- authentic choice
- meaningful connection

Freedom and structure are not opposites. They work together.

Natural Timing and Alignment

Within this structure, things do not happen randomly. Experiences, knowledge, relationships, and opportunities emerge at the appropriate time.

This includes:

- meeting important people
- development of skills and abilities
- emergence of new ideas and technologies
- re-forming of meaningful connections
- continuation of key relationships across phases

This can feel like:

- natural timing
- coincidence
- being drawn toward certain paths

These are not forced events. They arise from the structure of the system, ensuring that:

- nothing important is missed
- no experience is lost
- all beings move through a complete and fair journey

Limits That Preserve Safety

There are limits within the system. These exist to prevent:

- permanent harm
- destabilisation
- loss of wellbeing

They may appear as:

- hesitation or uncertainty
- fear that redirects behaviour
- natural boundaries

If harmful paths are pursued too far, the system redirects the experience. All outcomes remain:

- recoverable
- contained
- non-permanent

Balance of Freedom and Structure

Within each stage, beings are free. But the structure ensures:

- the pace remains meaningful
- knowledge is revealed gradually
- relationships and experiences remain intact
- no being is excluded from essential experiences

Key Insight

Freedom exists within structured stages of experience. Within those stages, beings are free to fully live, explore, and develop. The structure ensures that:

- everything unfolds at the right time
- nothing important is missed
- and all beings remain safe over the long term

25. Freedom and Support

All beings have access to:

- wellbeing
- support
- restoration

26. Existential Support

If overwhelmed:

- support is provided

- understanding is given

Life remains worth living.

27. Final Purpose Summary

Initially, all beings existed in full knowledge, harmony, and stability. In this state, the range of possible experiences is limited because all beings have complete awareness and no contrast. It was recognised that a fully known state limits the potential for new, evolving, and deeply varied experiences.

So beings created:

- a reality of discovery/adventure/exploration
- a journey through time
- the wellbeing-based use of contrast

Earth is the extreme entry, and a platform for a Post-Earth balanced intended state.

At the appropriate pre-agreed time God will wake up again in the pre-agreed way without disrespecting or disrupting the overall intended journey.
